The Companion Flag

The Companion Flag is a symbol of all that human beings have in common. It is displayed below the other flags of the world, on the same pole.

Together, these flags signify:

Here we are proud of our differences, our diversity, and our special affiliations, but we are mindful, too, of our essential humanity and all that we share in common with people everywhere.

(The color at the top of the Companion Flag matches any color appearing in the host flag above it.)

Size. The Companion Flag (hereafter, the CF) matches the overall size and dimensions of the flag to be flown or displayed *directly above it* (hereafter, "the host flag").

Example: If the host flag measures 36" x 60" the finished CF should also measure 36" x 60".

Materials. *Flag:* Nylon (200 Denier) or 2-Ply Polyester. *Header:* White or off-white canvas duck heading. *Fasteners:* #2 (3/8") rolled rim brass grommets for standard residential to light commercial flags, #1 (5/16") for smaller flags and garden flags, #3 (7/16") for slightly larger/heavier duty flags, and Thimbles or #4-6 (1/2" - 3/4") for large/industrial size flags, 8' x 12' and above.

Design. The CF is a bright, plain white field with a single-colored stripe across the top (no white showing above the stripe).

Stripe Dimensions. The height (or thickness) of the stripe is 20% of the overall height of the CF.

Example: If the finished CF measures 91cm 183cm, the stripe at the top will be 18.2cm thick [91 x .20 = 18.2].

Stripe Color. The stripe's color matches any color appearing in the host flag. When the host flag has multiple colors (e.g., the flag of Algeria), the choice of stripe color (red or green) should be discussed and agreed upon with the customer in advance.
